YOU NEED TO KNOW ABOUT CARAVAN BRACKETS (FRONT MOUNT)

The Mangrove Jack caravan brackets bolt onto your front storage box of your caravan. These brackets are usually positioned approx. one metre apart and carry all the portable boat trailer components and wheels.

DRAWBAR AND REAR AXLE

The longer trailer parts, the drawbars and rear axle, drop into the upright forks of the brackets so they are horizontal above the bumper.

The two brackets complete weigh approximately 5kg in total and are all aluminium with stainless steel fittings.

Mount wheel extrusion to either side of bracket (to suit your individual setup)

TRAILER WHEELS

The trailer wheels slide onto the outward facing box sections and are held in place using the same gravity pins from the trailer.

HOW TO SECURE THE TRAILER COMPONENTS

The drawbars and rear axle are held down into the brackets by using a ratchet strap. All other pieces are held in place using the pins from the trailer (except for the lightboard).

THE FINEST QUALITY BOAT TRAILERS IN AUSTRALIA
